

intelligent solutions, delivered.

Unison Systems: Intelligent Solutions, Delivered

We've built our team from IT industry insiders because we know that the key to delivering innovative, high value data solutions and expert IT consulting lies in working together to tailor solutions to your particular business challenges. We carefully listen to, and analyze, your needs to design and deliver customized solutions that align strategy with the right technology.

We have over fifty years of combined IT experience, with comprehensive business knowledge and understanding of cable, telecom, and financial data. Our technology practice focuses on the following disciplines:

- > Data Management, Architecture and Data Warehousing
- > Business Intelligence
- > Identity Management & Data Security
- > Systems Integration & Architecture
- > Program/Project Management
- > Software Development

We can provide a full spectrum of support to include End-to-End Solutions, Pure Project Management, Blended Team Management, Project Team Augmentation, Executive Level Consultation, and/or Technology/Business Advisory. We also have the ability to code and host your solution on-site or in-house at the Unison offices.

Return On Investment

Unison Systems leverages proven experience with mining, analyzing, enriching and aggregating data from numerous industries to provide your company with the vital information needed to make insightful and effective strategic business decisions.

By transforming and integrating raw data from all your systems into powerful, actionable information, we can help your company achieve measurable results: gain operational efficiencies, decrease costs, and increase revenue.

Unison Systems' expertise includes all aspects of Data Management and Business Intelligence technology, along with extensive knowledge of technical platforms used in both commercial and open source data management applications:
